

# 2023 D I R E C T O R Y

# INTRODUCTION

SASAD is the representing association of high technology manufacturers of Turkish Aerospace, Defense & Security Sector. As of 2020, the sector represented by SaSaD creates around 77.000 jobs; generates more than \$8,8 billion revenue and \$2,2 billion exports and carry out \$1,2 billion worth R&D initiatives.

This Directory provides a comprehensive list of association members who deliver the major portion of Turkish Armed Forces' equipment needs. SASAD members are also the potential cooperation partners of foreign suppliers for international markets as well as Turkish market.

In the Directory; turnkey platforms & systems, components, equipment and services are outlined including the contact details of the related companies to enable interested parties to get in contact directly. In company profiles, technological capabilities are also addressed. Most of the systems and products are combat proven and all of them comply with NATO specs.

In case of a requirement that may not be met by the existing portfolio of products, it is possible that our members would form a team to fulfill such a requirement. Should any need arises in this scope, SASAD is the right address to get in contact.

We are proud to serve Turkish Armed Forces and friendly countries' defense & security needs with our great portfolio of products, capabilities and services.

**Osman OKYAY**

Chairman of Board  
SASAD

# ABOUT SASAD

SASAD was established in 1990 with the directive and full support of the Ministry of National Defence to represent the Turkish Defence Industry. In 2012, the Turkish Civil Aviation and Space Industry Manufacturers joined SASAD and SASAD's name was changed as Savunma ve Havacılık Sanayii İmalatçılar Derneği (Defence and Aerospace Industry Manufacturers' Association). Today SASAD is the primary association to represent Defence, Aerospace, Space and Security sectors in Turkey.

SASAD has 208 members including 5 clusters having approximately 1.000 members under their umbrella.

SASAD has been representing a sector of high technology and added value with \$8,8 billion revenue, \$2,2 billion export activities and \$1,2 billion R&D activities. The sector provides employment to 77.000 employees that are directly working at sectorial institutions. Most of them (24%) are engineers, the remaining are university graduates (%12) and technicians (%49). Only 14 % are non-skilled employees. SASAD is an active member of European Aerospace, Defence and Security Association (ASD).

SASAD's mission:

- To ensure that strategic interests of Turkish Defence, Aerospace, Space and Security industry are properly represented
- To create the best climate in which its members can do their business
- To become a single address for its members as well as those foreign companies requesting to establish relations with the sector
- To establish the sectorial common view regarding economic, legal and commercial aspects affecting the sector and perform lobbying activities with government officials regarding such views
- To provide information regarding the domestic and international market opportunities and organize events to bring its members with national and international sector players in order to achieve synergy and cooperation
- To prepare reports by collecting statistics and data as well as making analysis about the sector performance

## AKANA MÜHENDİSLİK

## PROFILE

As a solution partner for the Aerospace & Defence Industry, AKANA Engineering has been implementing engineering, design, R&D and production projects for the last 33 years in the scope of its sustainable development strategy. AKANA Engineering's vision is to become a worldwide known and reliable, leading engineering and R&D company which implements all activities, starting from critical part production up to the establishment of turn-key facilities, by developing new Technologies. AKANA has a proven experience in the design and manufacturing of energetic material production equipment. Our state of art mixers are ex-proof, temperature / pressure controlled & with double planetary kneader technology. The family of mixers designed and manufactured have; 0,5 lt (1 pint), 4 lt. (1 gallon), 120 lt. (30 gallon), 600lt. (150 gallon), 300 gallon and 500gallon capacities. AKANA is also a qualified vendor for NSPA which is the supply agency of NATO.

## PROFILE

Alkin Compressors designs and manufactures reliable and efficient devices used for compressing air. It is specifically designed to meet various industrial and commercial needs where compressed air is required. Alkin Compressors utilize a piston-driven mechanism to compress air and store it in a pressurized tank.

With a compact and robust design, Alkin Compressors offer high performance and durability. Our equipment is manufactured with powerful motors that drive the piston, generating substantial air pressure. The compressors feature a cooling system to prevent overheating during extended operation, ensuring optimal performance and longevity.

Alkin Compressors products are available in different sizes and capacities to accommodate varying air compression requirements. They come with adjustable pressure settings, allowing users to regulate the output based on specific applications. The compressors are equipped with safety features such as pressure relief valves to prevent over pressurization and protect the system from potential damage.

In conclusion, Alkin Compressors offer a dependable solution for generating compressed air. Their robust construction, efficient operation, and versatility make them suitable for a wide range of industrial and commercial applications. Whether you need a portable compressor

for on-the-go tasks or a stationary unit for continuous operation, Alkin Compressors provide a reliable source of compressed air.

## PROFILE

ARES Shipyard has built up in 16 years to become the country's fastest-growing company and its largest exporter of military and commercial vessels. By employing the latest technology in both construction techniques and design, ARES products lead the way in the fields of military and commercial sectors. Founded in 2006 by the Kalafatođlu family, ARES Shipyard was initially established to produce pleasure craft and fishing boats, based on the family's long tradition of shipbuilding and sailing. In order to grow the company significantly, a strategic decision was taken to move into the military and commercial sectors, drawing on the company's expertise in working with steel, aluminum and composite construction. By investing heavily in elements such as human resources, organization and quality management, integrated logistics support and advanced production technologies, ARES Shipyard has achieved its aim and has secured numerous sales to naval forces, coast guards, maritime law enforcement agencies, and private companies.

## PROFILE

With more than 25 years of experience, we work on Electronic Circuit Design, Software Design, Device Mechanical Design, In-Unit, and Inter-Unit Cabling. We also offer off-the-shelf products in military standard Power Electronics, Control Systems, Motor Drives, Audio and Video Transmission Systems, Siren Announcement Systems, Circuit Breakers, Battery Monitoring Systems, Data Recording Units, Lighting Equipment and Medical Devices. In addition to all these, we carry out mass production activities such as the production of mechanical parts of the designed products, the production and typesetting of electronic circuit boards, the production of internal cabling and external cabling of the devices, their integration with each other and the implementation of unit tests. We ensure the reliability and stability of our products with our traceability-oriented approach provided by our quality assurance system. We direct our new projects with the data we collect thanks to the products we have developed and produced for more than 10 years, which have been used in the field under harsh conditions and have successfully fulfilled their duties.

**Mehmet Birdane** Deputy General Managers

**Mehmet Şen** Deputy General Managers

## PROFILE

Botek Arge Kimya has a critical role in meeting the needs of the National Defense Industry with solutions and products whose production processes are designed and completed by us, where all of the raw materials, intermediate and final products in the field of chemistry are provided with domestic resources. Our company offers cost-effective original solutions with superior technological features by using existing laboratory and test facilities, 20 years of experience and "know-how" developed.

Our main goal is to eliminate foreign dependency in chemical technology within the framework of its fields of activity, to generate economic value by increasing exports instead of imports, to contribute to the increase in employment, and to be a national defense company that trains engineers with advanced scientific and technological knowledge.

## PROFILE

"CEY Defense and Simulation Systems Inc. is a young and dynamic company incorporated by the engineers who have vast knowledge and experience in defence and simulation areas. The focus area of the company is advanced and comprehensive simulation technologies, and the targeted sector is defence industry. Company has a strong corporate infrastructure in addition to strong engineering teams and experienced staff developing innovative and unique software solutions. These solutions can be separated into 3 main categories Simulation, Integration and Validation. It is possible to develop real world systems, data and events as "models" in simulated environment with CEY Defence's model development tools and libraries like MODE and REOM. Simulation systems can be integrated to each other or connected with other systems quickly using CEY Defence's interoperability products and supports like ARTI and SISE. Simulated data can be provided to real world systems and simulators, and then systems and models can be verified and validated easily using CEY Defence's simulation and test environments like SITE and TEFS. MODE is the model definition language and tools family which can be used in conceptual modeling phase in simulation projects. It shortens

the development time by the help of automatic code generation. It is a dynamic adaptive, visual tool compliant with HLA and DIS standards. ARTI is the advanced run-time infrastructure which is used for the interoperability of simulation systems. It maximizes reusability and minimizes the integration efforts. It provides fast and reliable communication and abstracts the HLA details. SITE is the simulation and test environment for Defence Systems. It provides a test environment for military weapons and systems. It has a easy-to use graphical user interface, supports 2D with digital maps and 3D with game engine integration. It is possible to use SITE with MODE and ARTI to provide a complete simulation and modeling development framework."

## PROFILE

"DEARSAN Corporation has been recognized as Turkey's prominent shipbuilding company since its establishment in 1980. Until 2007, the company built and repaired many commercial vessels such as tugboats, chemical and oil tankers, fast passenger ferries and cargo ships. DEARSAN Co. has added a significant privilege to its design and construction capabilities by focusing on military shipbuilding, considered to be more comprehensive field of expertise since 2007. DEARSAN Co. has built and delivered 16 New Type Patrol Boats (TUZLA CLASS) for the needs of Turkish Navy Command under the agreement between DEARSAN Co. and the Presidency of Defense Industries.

DEARSAN Co. have produced the export version of these Tuzla Class Patrol Vessels and delivered 10 units of them to Turkmenistan. Construction took place in the shipyard which was built by DEARSAN Co. DEARSAN Co. exports; Corvettes, Patrol Boats, Fast Attack Craft with Guided Missile Systems, Fast Intervention Boats, Hydrographic Survey Vessels, Ocean Going Tug Boats, Landing Crafts at the same time, DEARSAN Co. became the first Turkish private shipyard which carried

out technology transfer including all training and integrated logistics support services.

Above and beyond; DEARSAN Co has indigenously designed and built 92 m Corvette for the Turkmenistan Naval Forces having modern weapons and sensors of which had been started in 2019, has reached the delivery phase.

Besides, another project for 2 units of 76 m Offshore Patrol vessels to be delivered to Nigerian Navy is ongoing.

Furthermore, our Group owns another modern shipbuilding facility located in Yalova, Turkey called ALTINOVA Shipyard and a Research Development Company called DEARSAN Defence located in Teknopark İstanbul. ALTINOVA Shipyard has the largest indoor shipbuilding facility with a total area of 140.000 m2.

## PROFILE

"As the pioneer of each technology that we have developed through our vision to design the future, which we have adopted since our establishment, we have been designing and developing artificial intelligence, cyber security and big data solutions through software, hardware, test and verification as well as system integration abilities that we have acquired over the years at our Technology Center of Excellence (TCE). As the leading UAV platform producer in Turkey, we are shaping the future with indigenous systems, each piece of which we have been developing with our national capital, in the field of unmanned systems. As one of the world's exceptional companies operating in the field of Hydrogen and Fuel Cell Technologies, we are configuring the future of Clean Energy, main strategy of our group's sustainability practices, at our state-of-the-art new generation laboratories thanks to the broad experience we have gained through conducting numerous R&D studies and adopting a model registered with awards in advanced technology studies in cooperation with universities and industry. We are closely following up on our country's vision, strategy and goals in space technologies, and making effort to contribute to humanity's scientific knowledge and experience with our

competent to meet the needs in the field of space technologies. We are providing the most innovative advanced imaging and biometric security solutions in critical facility and border security technologies, which are essential requirements against ever-increasing asymmetric threats across the world. We are also offering solutions for healthcare systems, which are modular, able to perform artificial intelligence based predictive diagnostics and have been integrated with high technology such as healthcare management, imaging and treatment systems as a result of the recent developments in technology.

## PROFILE

Mesan is an engineering, R&D, integration and manufacturing company established in 1991 operating in the field of homeland safety and traffic security. Since its establishment, Mesan is providing mission-critical devices, systems to the Gendarmerie General Command, the General Directorate of Security and other public institutions and organizations.

Mesan offers metal mine detector, IED detector, detector training systems, Virtual Reality based detector simulation solution to the Turkish Armed Forces, Gendarmerie General Command and General Directorate of Security.

Mesan also produces speed detection and traffic statistics systems for the Police and Gendarmerie Traffic teams as well as for Highways and Municipalities.

Mesan has necessary approvals from MoD for Factory Security certificate along with Production Approval certificate from Ministry of Industry.

Mesan has been certified by the Ministry of National Defense within the scope of national and domestic development of these sensitive solutions by the Ministry of Facility Security and Industry with production permit certificates. Mesan, which has kept quality and customer satisfaction at the top since its establishment, has been certified with ISO 9001:2015, ISO 14001:2015, ISO 10002:2018, ISO IEC 27001:2013, ISO 45001:2018 quality certificates."

## PROFILE

Meteksan Defence Industries Inc. is one of the largest Turkish defence technology companies, operating in areas;

radar systems, perimeter surveillance systems, electronic warfare systems, laser & electro-optic systems, communication systems, underwater acoustic systems and platform simulators. It is part of Bilkent Holding, a large conglomerate funded by Bilkent University and which is one of the largest industrial private groups of Turkey. Meteksan Defence takes part in Turkey's main platform projects, such as corvette programs, helicopters and unmanned aerial vehicles (UAV), anti-tank and air defence missile systems.

Company's main work areas and products can be summarized as follows:

ULAQ Unmanned Surface Vessel

MILSAR SAR/MTI Radar

Retinar Perimeter Surveillance Radars

KAPAN Counter Drone System

Radar Altimeters

Electronic Warfare Systems

Data Links for Missile Systems

Tactical Data Links

YAKAMOS 2020 Hull Mounted Sonar

Transducers and Hydrophones

Underwater Early Warning Sensor Networks

Damage Control Simulator

Fire Training Simulator

Various Electronic Sub-Systems

## PROFILE

MILMAST is a leading international designer and manufacturer of premium Carbon Composite and Aluminium Telescopic Masts that optimize the performance of C4ISR systems, radar systems, optical surveillance systems, fire control systems and communication systems with advanced Integrated Logistics Support (ILS) service. MILMAST also designs, engineers and manufactures All-Aluminium Military Trailers that operate with an ISO 9001: 2015 certified quality system. The company's advanced solutions are designed to support a variety of different high-precision equipment of land, naval and air platforms as well as commercial and public applications. Combined with design and manufacturing skills, company's capabilities also include Platform / System Design & Integration, Qualification and Analysis. We tailor the solution to meet your needs to make decisions quicker when it matters the most. Our reputation is built every day by the valuable equipment entrusted to us.

## PROFILE

"Based on innovative thinking, advanced technology and quality with 4 group companies.

Norm continues to engage in activities in the fields of production and service since 1988 with its 4 companies. Ensuring highest levels of customer satisfaction in the said fields based on quality and by continuously improving technology, our companies perform successfully in the international market as well. We develop projects beneficial to both environment and people with a modern management mentality.

Our mission is to provide our products to users meeting international standards and in the fastest way possible and maintain highest levels of customer satisfaction by understanding the needs and expectations of our customers.

Our vision is to have a corner in the market by developing innovative projects.

Our company produces Chemical, Biological, Radiological, Nuclear (CBRN) Protective Suits, Overboots and Gloves. The CBRN protective products we produce are produced and tested according to NATO AEP-38 standard. The products we produce have high protection capacity, are comfortable and do not restrict mobility. We produce ballistic protective vests that can be worn over and under shirts with different protection levels. The protection level of the ballistic protective vests we have produced are IIA, II, IIIA, III and IV. We also manufacture full protection and tactical explosive disposal suits (EOD) and demining suits. We also sell light and heavy weapon ammunition such as 105 mm, 120 mm, 155 mm."

**Bekir KAZANDIR** Contact

## PROFILE

"Founded in 1991, "ONUR Yüksek Teknoloji A.Ş." (ONUR) manufactures mission-critical voice/data communication systems and solutions for defence and civilian sector, with the vision of "\*\*\*\*\*"to be a regional leader with professional engineering in Voice Communication Systems & Data Communication Systems by having unique and advanced technology". ONUR is an independent and privately-owned corporation with a particular focus on three business areas:

- Voice Communication Systems
- Data Communication Systems
- CNS & ATM Systems Integration

ONUR provides value added software development, mission critical communication systems design, complex voice communication applications, adaptation of legacy radio and telephony systems into IP networks, operator consoles, voice and data communication and recording systems, radio over IP (RoIP) systems, IP over Radio (IPoR) systems, voice over IP (VOIP) systems, training and simulation systems, and mobile air control tower systems. VOICE COMMUNICATION SYSTEMS allow effective interconnection of multiple communication sources including HF/VHF/UHF radios, telephones, intercom systems and legacy au-

dio distribution systems. To enable air to ground (A/G) and ground to ground (G/G) communication, controllers can access all of the sources through highly intuitive user interfaces. Voice/Data Recording and Replay System (ORS-IP2000) can record and replay all voice communication, radar screens, radar exchange data and Raw Radar Data. It is able to interface with 3rd party systems to record and replay industry standard VGA/DVI/HDMI screen captures. DATA COMMUNICATION SYSTEMS come forth as a concrete solution for establishment and government of mobile Ad-Hoc networks, to effectively enhance connectivity, while offering scalability and flexibility. The system brings IP based mesh network capability for legacy radios, in addition to other newer generation IP based High Capacity LOS, SATCOM, HF, UHF, and GSM systems. Our data communication systems rely on uninterrupted, ad-hoc mesh network, that is established and maintained without human interference."

**TTAF**

ELECTRICAL WIRE HARNESS MANUFACTURING, ELECTROMECHANICAL ASSEMBLY, MECHANICAL ASSEMBLY, DESIGN, TEST

## PROFILE

TTAF Defence is a young and dynamic defence and aviation company that provides wiring and electromagnetic assembly services to platform manufacturers. Founded in August of 2013, the company benefits from experience of its sibling company TTAF Electronic, which is active in Istanbul since 2003.

TTAF Defence continues its research and technological development and at the same time utilises existing capabilities in providing services to the sector. Creative activities are frequently performed in order to further the knowledge. Research and development works are undertaken, some of which are funded by the company itself, to create new applications using the obtained knowledge. In this regard, TTAF Defence gained the status of Research and Development Centre status on 1st of July, 2018.
